## VIRTUAL MEETING PROGRAM & FACULTY

### GENERAL EDUCATION INFORMATION

The California Society of Plastic Surgeons (CSPS) seeks to see beyond the traditional functions of continuing medical education, and challenges itself to become a catalyst for, an advocate for, and a provider of education that promotes improved competence, performance, and patient outcomes in plastic surgery.

**Purpose:** Our CME program seeks to provide high-quality, evidence-based educational opportunities designed to advance plastic surgeons' knowledge, competence, enhance practice performance, and promote patient safety to ultimately improve patient outcomes in the populations served by the plastic surgeons we educate. In addition, the CSPS acknowledges the importance of culture and communication for delivering effective healthcare and is committed to educating physicians to deliver culturally and linguistically appropriate care.

**Content:** Our educational offerings include, but are not limited to, updates in clinical plastic surgery (aesthetic and reconstructive), reviews of current or best practice recommendations for plastic surgery care, evaluation of new and emerging technologies and techniques in plastic surgery, as well as patient safety.

**Target Audience:** We seek to serve not only the educational needs of plastic surgery healthcare professionals (board-certified plastic surgeons, plastic surgery residents and fellows, nurses and office staff) involved in the provision of plastic surgery services within the state of California, but the needs of local, regional, and national healthcare professionals and colleagues as well.

**Types of Activities:** As a CME provider for the largest plastic surgery state society in the country, the CSPS' educational activities include, but are not limited to, lectures, panel sessions, paper presentations, clinical round table discussions, hands on, live and didactic instructional courses. The educational design, instructional method and learning format for each event is chosen to best serve the educational needs and learning objectives of the planned educational activity.

**Expected Results:** We expect participants to report improved knowledge and competence as expressed by greater confidence and knowledge in their approach to clinical problems or by an intent to change their behavior and apply newly acquired strategies in their practice. We expect participants will have greater confidence in delivering care and patient safety. In addition, if evaluated within the clinical practice setting, we expect improved performance parameters or a favorable impact on patient outcomes.

The Online Sessions will consist of panel presentations on timely subjects which affect the plastic surgery specialty. Papers will also be presented during these sessions. These papers are on various clinical topics and include summaries of research, observations based on experience, clever tricks to handle difficult problems, new instrumentation, development of new technologies, trends, statistics, safety issues and other comments about clinical practice that may be of value. The CSPS will also address cultural and linguistic competency issues and is dedicated to providing the participants with the necessary data, assessment tools and the development of resources plastic surgeons may use in their practices to address these issues.

The overall objective of the Online Sessions is to present topics related to the core body of knowledge for plastic surgery, as well as increasing quality in the health care delivery system. The content will also cover innovative, recent and new research related topics of importance to the practice of plastic surgery.

All recommendations presented and scientific research presented must be based on evidence accepted within the profession of plastic surgery and must conform to the generally accepted standards of experimental design, data collection and analysis.

There will be question-and-answer sessions provided for each activity and participants are encouraged to use this time to address a difficult case you may have, query the speakers on their techniques, etc.

The CSPS takes responsibility for the content, quality and scientific integrity of its CME activities. As such, the CSPS follows the Accreditation Council for Continuing Medical Education's Standards for Commercial Support. By following these standards the CSPS ensures the independence of its CME activities. Current guidelines state participants in CME activities should be made aware of any affiliations or financial interest that may influence the content of this educational activity and/or affect the speaker's presentation. Each Scientific Program Committee member & speaker has been requested to complete a financial disclosure/conflict of interest statement. Disclosures are noted in this preliminary program. An asterisk (\*) after the speaker's name indicates the faculty member/presenter reported they had no relevant financial relationships or affiliations to disclose. All potential conflict of interests are resolved prior to any presentation. The CSPS also requires presenters to disclose when off-label/unapproved uses of the product are discussed in a CME activity.

Please note that each presenter for the paper presentations is denoted by being listed first.
